Summary

Started at Building, old multi level, longer than wide, narrow, gray and lite brown, flat topped. It is located among other buildings. The other buildings are similar. It is located in a poor area of flat dry land. There is a road nearby. There is a large body of water to the west and ~~at a greater distance there is water to east.~~ This is central America. Water to east is closer.

Summary:

I feel like the building identified as critical location (not necessarily his present location) is where we will eventually find him or where he will be eventually be. Perhaps we must find this building and await his arrival.

Building is not large but it's not a small building it is 3 or 4 stories top floor covers only part of building (see sketch). It has hallways and stairs (not large enough for elevator). It is more unexpectedly nice inside compared to outside. The N end is of most interest to me (for what ever reason). feel like this room (in sketch) has been prepared for something. (Renovated) This building is ~~is not~~ located in a area which also has a large ~~which~~ building with a dome and many archways. This building (with dome) has an official and religious feel about it (see aol on page 9). The road of interest runs NW-SE. The water is towards the NE when following the road. (This is the road near the site, mentioned in the session.) [see sketch page 3 and 10, and 11]

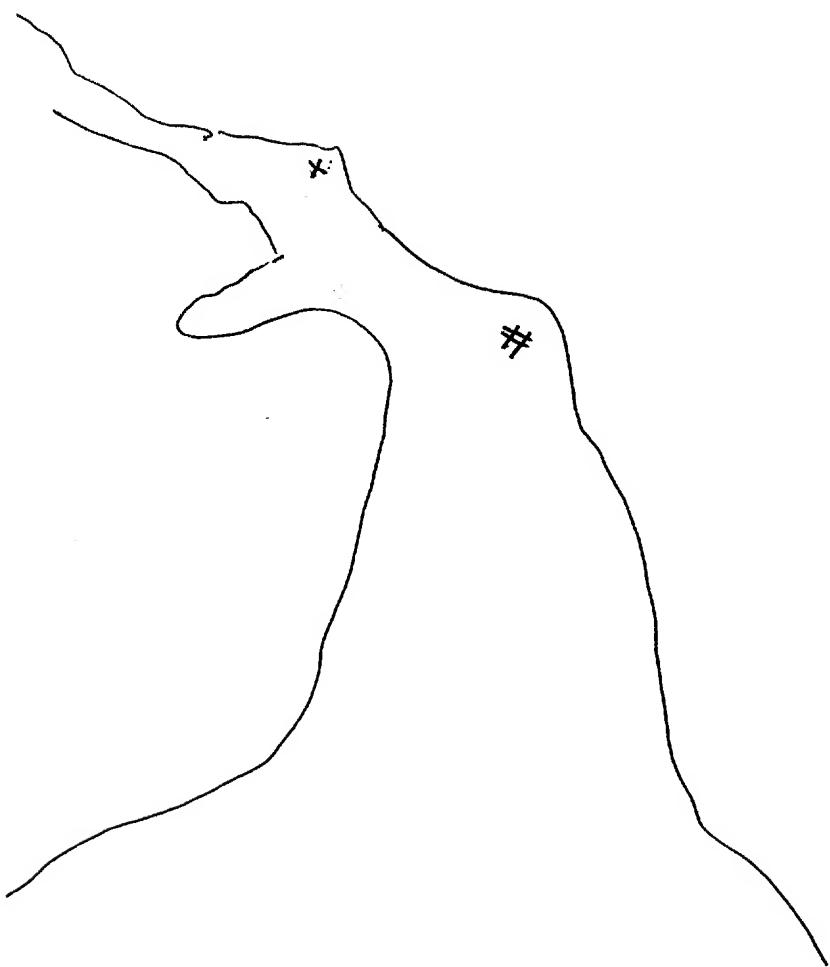

This road runs through this area.

Water is not far from this building in a westerly direction.
